

Alerta con Sensor de distancia

Código Arduino

```
const int led = 2, echo = 4, trig = 3;
int time = 0;
float distancia = 0;
void setup ()
{
  Serial.begin (9600);
  pinMode (led, OUTPUT);
  pinMode (echo, INPUT);
  pinMode (trig, OUTPUT);
}
void loop ()
{
  digitalWrite (trig,HIGH);
  delay(1);
  digitalWrite (trig, LOW);

  time= pulseIn (echo, HIGH);
  distancia=time/58.2;

  if (distancia <=150)
    digitalWrite (led, HIGH);
  else
    digitalWrite (led, LOW);
}
```
